FOR IMMEDIATE RELEASE

SY-CON Systems, Inc. Announces Availability of PC-TOOLCRIB Industrial Inventory Management System in the Cloud.

EASTON, PA - April 17, 2017

SY-CON Systems, Inc. a market leader of tool, asset, and MRO enterprise software announces its PC-TOOLCRIB solution is now available as a secured cloud-based application known as PCTCloud. It has all of the major features of PC-TOOLCRIB to manage usage, track returnables, procure replenishment, calibrate/inspect, and track spend. It includes integrated modules for serialized asset and calibration management and a complete requisition-to-PO and RMA to EDI or email POs to suppliers, both of which would be optional additions for the desktop enterprise edition.

PCTCloud helps to lower inventory levels and associated spend by providing recommendations on best stocking levels based upon historical usage without causing stockouts that result in overnight shipments and potential lost hours of productive work. A status dashboard assists by exposing other critical concerns like overdue POs, past due calibrations, expiring shelf life products, employees still holding serial assets longer than needed, and items designated as critical needing to be ordered immediately. It tracks usage and charges to employees, departments, jobs, or other cost centers, and provide monthly comparisons of department spend to their annual budget.

PCTCloud is accessible from fixed desktops, laptops, or with an iPad or Android tablet to manage tools, MRO, safety, gages, shelf life product, equipment, non-stock/spot buy items, extinguishers, freely taken items like fasteners, and other indirect materials. This flexibility enables all types of inventory to be controlled and reported on remotely or within a toolcrib, maintenance crib, storeroom, at a job site, or by management. It works with a variety of barcode scanners from Bluetooth miniature scanners used with an iPad and Android tablets to wireless/cell fully interactive mobile devices reducing data errors and more efficiently recording inventory transactions. Among its many features it supports importing of data using spreadsheets or other file formats reducing the time it takes to become operational.
About SY-CON Systems, Inc.

For over 30 years SY-CON has been helping customers worldwide deliver results and maximize their return on investment with extremely powerful and functional tool & MRO inventory management and maintenance management software solutions, exceptional customer support, and responsiveness to changing requirements.
